

THE PARADISE FOR MECHANICAL ENGINEERS.

WE

MAKE

MAKING

Our customers' wishes have been the focus of our family business since 1924. As a proactive commercial and manufacturing enterprise, today we offer much more than materials and components. We impress our customers with an individual service and a broad range from standard products to customised solutions.

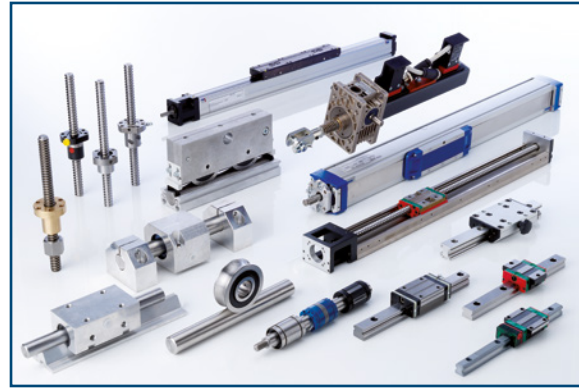

POSSIBLE.

YOU CAN'T ORGANISE
PROCUREMENT ANY BETTER.

Technical Rollers

Profiles + Systems

With 4 product areas, DRECKSHAGE offers variety and depth of service, which is unique in this form. From classic materials to ready-made parts from drawings; from aluminium profiles to customised machine housing; from mobile linear technology to customised technical rollers.

With our pioneering service, we offer the exact manufacturing level to best support your value creation. Soft edge finishing is only one example of how everything runs smoothly with DRECKSHAGE. As far as logistics, expertise and human values are concerned; we make making possible.

Non-ferrous metals

MATERIALS.

Reliable material management is a central theme today for any manufacturing business. With DRECKSHAGE, you derive all the benefits from an experienced materials specialist. Qualified advice gives you confidence in your decisions. Well-ordered stock with over 100 materials in 50 profile types and over 1000 dimensions guarantees fast and reliable delivery.

A PARTNER FOR ALL QUESTIONS OF MATERIAL.

Stainless steel

High strength steel

Engineering plastics: semi-finished products

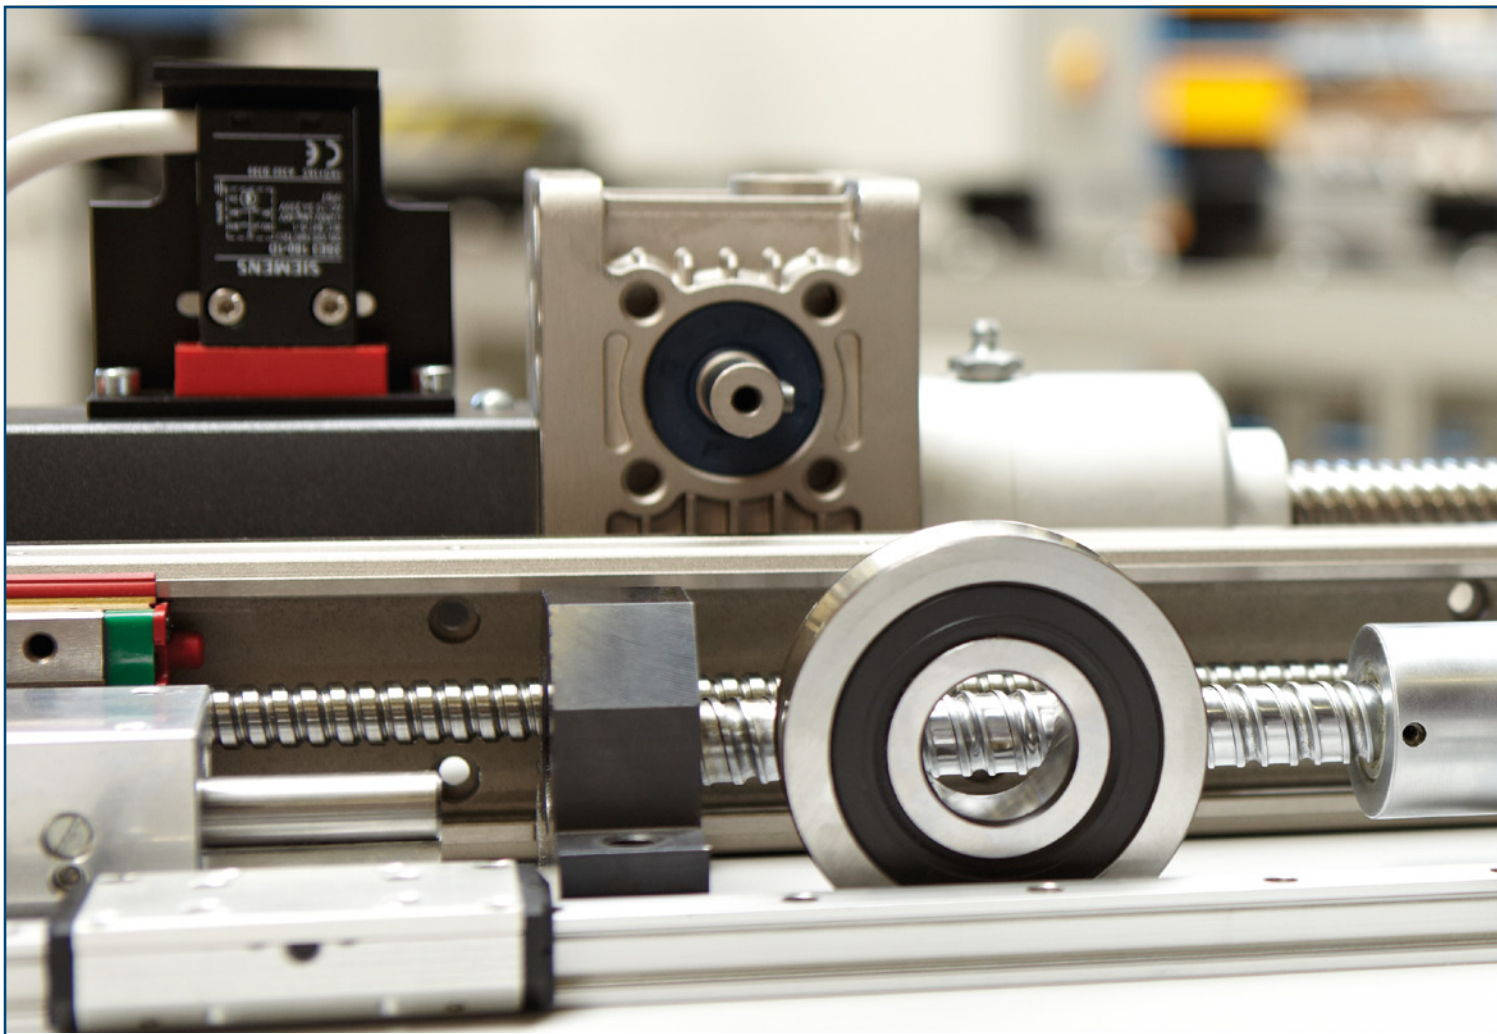

Engineering plastics: finished parts

Non-ferrous metals

Steel and non-ferrous metals in all dimensions and qualities, DRECKSHAGE inspires you as a reliable partner for materials. Prime performance in application starts with high quality materials after all.

Engineering plastics are moving more and more into focus in plant and mechanical engineering. DRECKSHAGE offers a comprehensive range of thermoplastics and thermoset laminates as well as sophisticated drawing parts from our manufacturing centre.

Ball and roller bearings | Customized parts

TECHNOLOGY

ON THE

To develop 11 product lines, which offer the most economical and efficient solutions for our customers, has been the challenge for our engineers for over 40 years. A large selection of linear guides and drive elements are ready in our warehouse for delivery. Furthermore, ready-made components and construction units from our manufacturing centre complement the broad range.

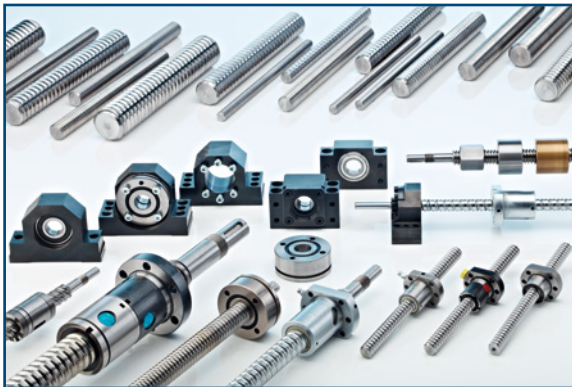

MOVE.

Round guide systems

Rail guides

Screw drives

Customized parts

From standard products to ready-made components,

DRECKSHAGE is particularly fast and flexible when individual requirements need to be met. An example is our ability to deliver customised, induction-hardened circular guides according to drawings within the shortest time.

LEADERS IN DRIVE AND GUIDE CONCEPTS.

SYSTEMS.

Cost effective and multifaceted constructions

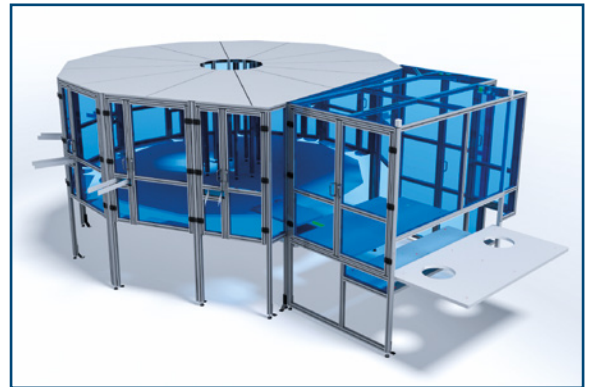

with the KANYA profile modular building system; it allows you to build stable machine cladding, protective housing, and work station furnishings. In principle anything you can imagine with minimum effort.

The pipework clamping system delivers customised solutions to optimise manufacturing processes as well as using kaizen and lean manufacturing principles.

PROJECT PLANNING RIGHT UP TO ASSEMBLY. TAKE ADVANTAGE OF THE PROFESSIONALS.

Kanban shelving systems

Manual assembly station

Our core expertise: planning, construction, finishing.

If you would rather concentrate on your own main responsibilities, then rely on our many years of know-how. We provide the solutions to your tasks.

Technical rollers by DRECKSHAGE stand for the highest standards of precision. We manufacture technical rollers made from aluminium, steel and stainless steel – rounded off with individualised surfaces such as rubber coating, non-stick coating, chrome or grooving according to your requirements.

Soft Edge finishing | Own manufacturing centre

PROCESSES:

Short delivery times | Material service centre | 24 hour self-pick-up option

SERVICE.

The customer is our focus. We want to impress you with our highly qualified and motivated employees. It is our challenge to take your requirements on board and to prepare our products in such a way that they flow quickly and smoothly into your processes; from the very first piece.

Cutting

Edging

Individualised production

Advice.

Technologies and materials evolve rapidly. Therefore it makes sense to talk to an advisor who is always up to date in the field and actively collaborates to find the best solution.

Preparation.

Modern machine assembly and experienced workers allow us to offer any required level of preparation: cutting, de-greasing, surface coating, soft edge finishing and much more.

Individualised finishing.

We take on the manufacture of complex components on request, such as linear components or building parts made of technical synthetics ready for assembly.

Assembly.

We plan, construct and finish complex system solutions based on customer requirements. You can concentrate on your main business whilst we create the optimum framework conditions.

Logistics.

Our logistics concept is oriented towards guaranteeing 100% reliability, including for small and medium sized batches. Our MATERIAL SERVICE CENTRE offers many options right through to full outsourcing of your material warehouse. The 24-hour collection box has proved useful for requirements at short notice.
